CONCEPT

Sabic Europe is one of the leading petrochemical companies in the world. For their new European head office, the company commissioned GROUP A to design an eye-catching building which would enhance the companies identity. The new building reflects their values: renewal, transparency and approachability. It will not only act as an inspiration for future development of the area, but will also set the standard for the design of other individual buildings in its surroundings. GROUP A

strongly believes in the inspirational power of unity between architecture, interior and landscape. Not only for its catalytic influence on buildings surroundings but, also to improve internal organisations and their working environment. The new Sabic head office possesses all of these qualities; landscaping, architecture, interior and state-of-the-art technology are all fully integrated and thereby create the optimum working environment for both social and psychological needs.
